

# FRAME FLAT GLASS

## PERSONALIZATION WHERE AND HOWEVER YOU WANT IT

The accessories also evolve in time, and under the same concept of the Frame range by Saheco, we introduce Frame Flat: a set of flat profiles that give a minimalistic industrial look to any sliding or fixed glass panels installation.

What do these profiles offer?

### 1. Two single aluminum profiles:

-U-Channel profile for perimeter framing, for glass thicknesses of 10mm.

-Flat profile for internal grids: same profile thickness on both sides of the door to achieve visual symmetry.

### 2. Limitless designs thanks to the sales format in individual unit profiles

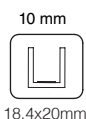

3. Supplied with high-quality double-sided adhesive tape, for a quick and clean installation.

4. Available in matt black lacquered aluminum, matt white lacquered aluminum and brushed nickel aluminum.

5. Compatible with most of Saheco's glass systems.
